Assignment 2: Build Basic Frontend Page

Title

Design and Development of Basic Frontend Homepage for **Computer Institute Management System**

Aim / Objective

To design and develop a static homepage using selected frontend technology and understand basic responsive design principles.

Problem Statement

Every web application requires an attractive and user-friendly homepage. The task is to create a static homepage that displays a welcome message and adapts to different screen sizes.

Theory / Concept

Frontend development focuses on designing the user interface of a website.

Key concepts:

- **Static Web Page:** A fixed page with predefined content
- **Responsive Design:** Adjusting layout for mobile, tablet, and desktop
- **UI Design:** Creating visually appealing interfaces

Technologies used:

- HTML for structure
- CSS for styling
- JavaScript (optional) for interactivity
- React for component-based UI

Tools & Technologies Used

- VS Code
- HTML, CSS, JavaScript / React.js
  Browser (Chrome/Edge)

Steps / Procedure

1. Create a project folder for frontend.
2. Open the folder in VS Code.
3. Create necessary files:
    - index.html
    - style.css
    - script.js
4. Design basic structure of homepage:
    - Header
    - Welcome section
    - Footer
5. Add welcome message:
   "Welcome to RC Rudraksha Computers – Empowering Digital Skills."
6. Apply CSS for styling:
    - Colors
    - Fonts
    - Layout
7. Implement basic responsive design:
    - Use media queries
    - Adjust layout for different screen sizes
8. Run the page in browser and test responsiveness.

Output / Result

- A static homepage for **Computer Institute Management System** is created
- Welcome message and institute details are displayed
- Courses are shown clearly
- Page is responsive across all devices

Conclusion

This practical helped in understanding basic frontend development, layout design, and responsive design techniques.
